

2014 SmartBox® Meter

The 2014 SmartBox® system meters will have the ability to connect to the planter's individual row seed shut off system (if equipped) to stop insecticide application when the seed meters are not applying seed.

2-wire cable
and connector

To utilize this feature, the SmartBox® meter's 2-wire cable can be connected to the planter's row seed shut off system using the included Y-cable.

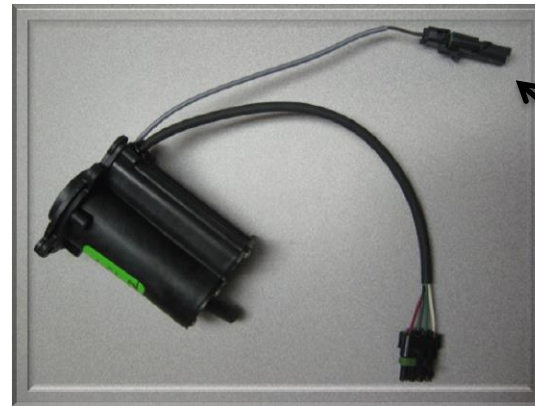

Note: You will only receive the Y-cable if you have ordered a system compatible with your seed meters.

If you do not intend to use the 2-wire cable to connect to your seed meters, be sure to secure the cable so that it does not become entangled during planting.
